Summary

Software developer with experience building React applications, integrating REST APIs, and leading frontend development for an AI-powered Chrome extension. Built Java and Spring Boot REST APIs with relational database persistence through projects and technical training.

Technical Skills

Languages: Java, JavaScript, TypeScript, SQL, HTML5, CSS3
Frontend: React, Angular, Next.js, Tailwind CSS, Vite, Chrome Extensions (Manifest V3)
Backend: Spring Boot, Spring Web, Spring Data JPA, Javalin, JDBC, Node.js, Express.js, REST APIs
Databases: MySQL, SQLite, MongoDB
Testing & Tools: JUnit, Mockito, Git, GitHub, Maven, Figma, IntelliJ, VS Code, Linux

Professional Experience

Front-End Developer Intern / Team Lead — Remote
Hawl Technologies, LLC – AI Startup — *Jan. 2026 – Aug. 2026*

- Built React interfaces for **AI Memory Box**, a Chrome extension and web platform, integrating REST APIs to store, retrieve, and display LLM conversation memory data.
- Contributed to refactoring a legacy HTML, CSS, and JavaScript codebase of approximately **20,000 lines** into modular React components, working across approximately **24 React component files**.
- Coordinated a rotating team of **3–4 developers**, planned sprints, assigned frontend tasks, led weekly meetings, and reviewed and tested pull requests.
- Created Figma prototypes, improved search/filter controls and onboarding, and resolved unreadable UI states, incorrect memory-cap messaging, and duplicate tab opening.

Caregiver — Tacoma, WA
Self-Employed — *2023 – Present*

- Provide daily family care while managing transportation, schedules, household responsibilities, and time-sensitive tasks.

Technical Training

Java Full-Stack Developer Trainee — Remote
Revature – Pre-Employment Program (Technical Training) — *Jul. 2026 – Oct. 2026*

- Implemented JavaScript frontend workflows for recipe CRUD, login/logout, and admin-only ingredient management, integrating with a Java REST API.
- Completed full-stack training in Java, Javalin/JDBC, SQL, Spring Boot, JavaScript, TypeScript, and Angular through **108 coding activities** and **14 technical evaluations**.

Projects

Fitness Tracker | *React, Node.js, Express.js, MySQL* — GitHub

- Rebuilt the frontend as a React single-page application with dashboard, workout logging, editing, detail, and personal-record pages.
- Created reusable layouts, workout forms, tables, metric cards, and status components for a responsive interface.
- Connected React pages to Express REST endpoints and MySQL to create, retrieve, update, and delete workout records.

Spring Social Media Blog API | *Java, Spring Boot, Spring Data JPA* — GitHub

- Built REST endpoints for account registration, login, and social message creation, updates, deletion, and retrieval by user.
- Organized request handling, business rules, and persistence into controller, service, and repository layers using Spring dependency injection.
- Validated duplicate usernames, required fields, message length, and referenced accounts before persisting data with Spring Data JPA.

TriviaMaze | *Java, Swing, SQLite, JUnit* — GitHub

- Built a Java Swing maze interface and queried SQLite for multiple-choice, true/false, and short-answer questions.
- Implemented question creation through a factory and save/load functionality using Java object serialization to restore game state.
- Contributed JUnit tests covering maze traversal, question-driven door behavior, game-over conditions, and save/load persistence.

Education

University of Washington Tacoma — Tacoma, WA
Bachelor of Science in Computer Science, GPA: 3.72 — *Jan. 2022 – Dec. 2024*
